Note On / Note off and all the parameter on the front panel can be controlled by control changes.

Size / Weight

140X80X35mm (without outshoot)
 185g

"BassBoy+" is digital based monophonic MIDI controlled bass synthesizer. "Juteion-shonen" is nick name. It's written in Kanji also beside of our logo. Call it as your favor.

"BassBoy+" is based on one board bass synthesizer that provided from MikroElektronika*. There was no knobs. All the parameter is drove from MIDI data stream. I develop its physical controller and put it together into a original enclosure. it's "BassBoy+" Original functions that BassBoy have can still alive on "BassBoy+".

Get MIDI stream from PC or iPad based sequencer and put it into "BassBoy+". Knobs are waiting to be tweaked. You can also play it by MIDI keyboard too.

The goal of this gadget is to feel the knobs. Change the sound by tweaking. You can do it just like playing musical keyboards. Feel sounds and beats with your fingers.

*"BassBoy" is Trademark of MikroElektronika. And beatnic.jp gets permission to re-sale of "BassBoy" from MikroElektronika.

MODEL: BassBoy+

Made in Japan
