MOUNTAIN

Monophonic Synthesizer Module

beatnic.jp's **MOUNTAIN** is MIDI driven Monophonic synthesizer module.

It's based on hybrid architecture. Audio path is made by analog process. Discrete schematics are used at important part. It's not only a clone of good old MS-20 but also added another new ideas.

The control voltage path is made by digital process to make it easy to control it from MIDI. The advantage of both methods are combine into one small box.

There is also CV+GATE input to interface with another equipments.

This is basic. It's most simple structure as analog synthesizer. beatnic.jp's **MOUNTAIN** is designed as not only good to play solo but also powerful base line.

Play it yourself and feel the groove of analog sounds of beatnic.jp's **MOUNTAIN**.

Panel Parameters

VCOS

Detune / MIX VCO1 & VCO2 / Octave Switch / Sync Switch / Wave Form Switch for VCO1(saw and sqr) / Wave Form Switch for VCO2(saw and sqr)

VCF

Cutoff frequency / Resonance / Modulation Depth for EG

VCA / EG

Attack / Decay(Release) / Sustain

Performance

Total tune / Glide / Vibrate Rate / Wave form Switch for Vibrate(saw and sqr) / Release Switch / Output Volume

Back Panel

Power switch / Output (audio) / AC adapter jack (DC 12V)/ Pitch CV in (1V/1Oct) / Gate in (0V-10V) / MIDI-IN

MIDI specifications

MIDI-CH is fixed to 1ch / Note on / Note off / Pitch Bend / Modulation Wheel (for vibrato depth) / Pitch Bend Depth(accepts 0,2,5,12 half tone only)

MODEL: MOUNTAIN

Made in Japan
Designed and Enginnerd by
beatnic.jp, Japan
